

# REDUCE WCDMA PA CURRENT 83% WITH DYNAMICALLY CONTROLLED STEP-DOWN DC-DC

## High-Speed DC-DC Adjusts 2.5G & 3G PA Supplies to Match Transmit Power

The MAX1820 is the first step-down converter designed specifically for the power amplifiers in 2.5G and 3G cellular phones. The baseband processor dynamically programs the converter output voltage based on the variable power required by the PA. The high-speed MAX1820 varies its output voltage from 0.4V to 3.4V in less than 30µs, tracking the PA transmit power envelope. By matching the PA supply voltage envelope, the PA minimizes power loss and maximizes battery life. The MAX1820 is equipped with a divide-by-13 or -18 phase-lock-loop to synchronize to a 2.5G or 3G system clock and does not add spurious noise into the RF band during actual tests with a WCDMA PA.

**FREE Power Supplies Design Guide—Sent Within 24 Hours!**  
**Includes: Reply Cards for Free Samples and Data Sheets**

**CALL TOLL-FREE 1-800-998-8800 for a Design Guide or Free Sample**  
 6:00 a.m. – 6:00 p.m. Pacific Time
